# Problem B Number Sequence 

Input: standard input

Output: standard output
Time Limit: 1 second
A single positive integer $\underline{i}$ is given. Write a program to find the digit located in the position $\mathbf{i}$ in the sequence of number groups $\mathbf{S}_{\mathbf{1}} \mathbf{S}_{\mathbf{2}} \ldots \mathbf{S}_{\mathbf{k}}$. Each group $\mathbf{S}_{\mathbf{k}}$ consists of a sequence of positive integer numbers ranging from $\mathbf{1}$ to $\mathbf{k}$, written one after another. For example, the first $\mathbf{8 0}$ digits of the sequence are as follows:

11212312341234512345612345671234567812345678912345678910123456789101112345678910

## Input

The first line of the input file contains a single integer $\mathbf{t}(\mathbf{1}<\mathbf{t}<=\mathbf{2 5})$, the number of test cases, followed by one line for each test case. The line for a test case contains the single integer $\mathbf{i}(\mathbf{1}<=\mathbf{i}<=\mathbf{2 1 4 7 4 8 3 6 4 7})$

## Output

There should be one output line per test case containing the digit located in the position $\mathbf{i}$.

| Sample Input |
| :--- |
| 2 |
| 8 |
| 3 |
